

Statement of Indicative Wholesale Water Charges and Charges Scheme

2023-24

South Staffs Water and Cambridge Water Indicative Wholesale Charges Scheme

Since April 2017, eligible business customers have been able to switch their retail supplier. The tariffs set out in this document form the wholesale part of the total end user charge and as such exclude the retail costs of providing water to the end customer.

In order to allow retailers sufficient time to develop their retail pricing proposals ahead of the beginning of the charging year, companies also have to publish indicative wholesale charges three months before final charges are published and these are contained within this document. Final wholesale charges will be published in January 2023 and will be updated using the latest information available including the November 2022 CPIH.

This charges scheme sets out our indicative wholesale charges to provide water to a retailer. All charges are effective from 1 April 2023 to 31 March 2024, unless otherwise stated.

Retailers should read these charges in conjunction with the terms set out in their wholesale contract for wholesale services.

This document also sets out the indicative wholesale charges for customers on special agreements who are eligible to switch to a retailer. If any interested party wishes to discuss these agreements then please e-mail wholesaleservices@south-staffs-water.co.uk

The non-household charges outlined below do not apply to vacant measured non-household properties. However, if meter readings record consumption at the property, normal charges will apply. Unmeasured vacant properties are also not charged.

South Staffordshire Water PLC

Board Approval of Wholesale Charges for 2023-24

Assurance Statement

In approving the indicative charges for 2023-24, the Directors confirm that they comply with the following provisions. This statement also sets out how the Board has assured itself of each provision.

1. The Company complies with its legal obligations (including competition law) relating to the wholesale charges published.

The water industry is subject to UK and EU competition law.

In order to ensure compliance, the Company has adhered to the Wholesale charging rules as set out by Ofwat in its Instrument of Appointment so that no undue preference or discrimination has been shown to any class of customer. Clear principles have been applied in setting tariffs such that customers pay the same amount for the same service, resulting in household and non-household tariffs being the same, except for any large user discount that could be justified, measured and unmeasured differentials represented by additional metering costs, and the historic differential between South Staffs and Cambridge regions being broadly maintained.

The Company's charges fully comply with these principles.

2. The Board has assessed the effects of the new charges on water supply licensees (as a whole or in groups) who are retailing wholesale services and on customers occupying Eligible Premises (as a whole or in groups) and approves the impact assessments and handling strategies developed in instances where bill increases for licensees (as a whole or in groups) who are retailing wholesale services and on customers occupying Eligible Premises (as a whole or in groups) exceed 5%.

We have assumed that the November CPIH inflation rate will be 10%. As a result, draft wholesale charges will increase by around 7.2%. We have communicated this increase to retailers in advance in order to give them the maximum amount of time to consider the impact on their own retail charges to customers.

A sample of customers on different tariffs has been chosen to demonstrate the impact and is set out graphically below:

Incidence effects on selected customers - Wholesale bill

The Company has appropriate systems and processes in place (including up-to-date models and data) to make sure that the information published about its wholesale charges is accurate.

We have used information from established reports from the Company's billing system.

The individuals involved at both Echo and the Water Company have been with the Company for a number of years and are familiar with the processes and information sources. In addition, although external assurance is not required, the Company's internal audit function has been used to give independent assurance on the data used. This approach is reviewed annually.

Finally, the Company along with one other water only company has continued to use the services of Frontier Economics to produce a tariffs model to aid the setting of compliant charges.

4. The Company has consulted with relevant stakeholders in a timely and effective manner on its wholesale charges schemes.

A statement setting out the proposed Wholesale charges was circulated to all Retailers supplied by the Company at the beginning of October 2022.

We have also confirmed with CCWater that we are not planning any changes to charges or rebalancing which will create bill shocks for some customers.

Approved by the Board of Directors on 29 September 2022 and signed on its behalf.

Andy Willicott
Managing Director
South Staffordshire Water PLC
